DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 5 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 5 is rejected based on lack of positive antecedent basis of "the analog signal having a periodic waveform" on lines 3-4.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claim 9 is rejected under 35 U.S.C. 102(b) as being anticipated by Schneider et al., U.S. Pat. No. 4,514,822.

As per claim 9, Schneider et al. (Schneider) shows an analog to digital converter (2); a memory connected to the A/D converter (4) that stores the digital signals; a register connected to the memory that stores an address signal (fig.2,(14)); and an address generator circuit connected to the register that generates and supplies the address signal (fig.2, (15)-(19)). Schneider shows all of the elements recited in claim 9.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The cited references show other systems which include either D/A conversions and DMA or various memory addressing techniques. However, none of these cited references appear to show the details claimed in the claims that were not rejected.

6. The following is a statement of reasons for the indication of allowable subject matter: Independent claim 1 includes the limitations that the register stores data from the data bus in response to an access signal from the address bus and that the data in the register is used as an address for accessing the memory. This combination of limitations does not appear to be present in the prior art.

Independent claim 10 includes a very detailed combination of limitations which are not present in the prior art.

Independent claim 11 includes the limitation of a circulating address stored in the register which is used to control the reading of data from the storage device. These limitations are not present in the prior art.
